

a SPECTRA

$\log(1 + x)$   
NNLS gate  $\geq 0.15$   
23,125 hit pixels  
the gate never becomes a feature

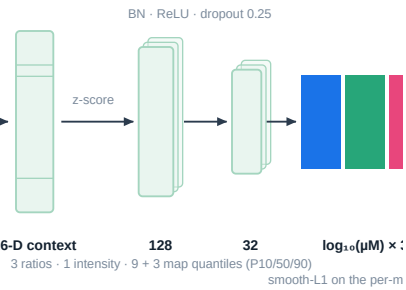

b COMPOSITION HEAD

one prediction per pixel

c CONCENTRATION HEAD

one prediction per map

Leave-one-condition-out · 71 distinct compositions, the model refit once for each  
every map of a held-out composition leaves together, so a repeat measurement is never scored against its own twin
